

Midwest Rails

Moving trains from Track 1 to the Siding

1. Move the train(s) on Track 2 to the side opposite the Siding.
2. On the two (2) Crossover modules, turn the power switches to "OFF".
3. On the Power Table, throw the track selector switch, under the "red cover", to YARD. This gives the hand controller 1 total power control on the layout.
4. On the Power/Siding Module, turn the power switch "ON".
5. Throw the required Turnout Switch on the Crossover Module to direct the train from Track 1 to Track 2.
6. Move the train from Track 1 to Track 2
7. Return the Turnout Switch to mainline.
8. Continue moving the train on Track 2 and into the Siding.
9. Turn the Siding power switch OFF.
10. Push Down the "red cover" on the track selector switch returning control of Track 2 power to hand controller 2.
11. On the Crossover modules, turn the power switches to "ON".
12. You are now back to NORMAL operation.
